

KULZER PRODUCTS RANKED AS DENTAL ADVISOR TOP PRODUCTS

Hanau, March 2020 – The Dental Advisor has named the TOP and preferred products for the year 2020. Again, several Kulzer products are amongst the testers' favourite products. For years, leading Kulzer products feature on the list of recommendations. Three products in the field of impression taking demonstrate Kulzer's great expertise in this area: xantasil convinced the consultants as TOP alginate alternative for the fifth time; Dynamix® speed won the TOP Product Award as TOP dynamic mixer and Flexitime Fast & Scan as TOP scannable impression material completed the triple award. For the ninth time in a row, the consultants recommend iBOND Total Etch and Venus Pearl as the preferred aesthetic composite.

“For Kulzer it is a great honour that clinical consultants year after year recommend our products to their colleagues because they are convinced by the products' quality”, states Dr. Sascha Cramer von Clausbruch, Chief Technology Officer of Kulzer. The 2020 TOP product awards and preferred products were reviewed from among hundreds of products and rated by The Dental Advisor's editorial board and 250 practicing clinical consultants in the United States.

Flexitime Fast&Scan won the TOP product award as scannable impression material and is well recognised for its good digital accuracy. Besides high precision and flexibility, Flexitime Fast&Scan offers the additional option of direct digital scanning. This convinces consultants for years. Impressions using Flexitime Fast&Scan were easily read by digital scanners and produced an excellent fit of the restorations.

xantasil – an addition-curing, elastomeric alginate substitute – produces robust impressions with long-term dimensional and storage stability. The alginate alternative was again chosen TOP product because of its reliability: for years it convinces consultants because they found the models to be identical after multiple pours, indicating a lack of distortion.

The award for Dynamix speed as TOP dynamic mixer rounds off the picture and shows Kulzer's experience and expertise in impression taking. It offers multiple mixing modes, including a high-speed option, is easy and safe to handle.

iBOND Total Etch is the light-curing etch & rinse (two-step) bonding system that is easy to use with its application in just one bonding layer and rapid air-drying. The specially designed bottle controls drops evenly and minimises waste. The bond strengths as tested in the Dental Advisor laboratories are always described as excellent.

A long-term study performed by the Dental Advisor attested Venus Pearl resistance to fracture and microleakage. Venus Pearl is highly esteemed for its “good consistency and aesthetic results” and for polishing “to a high lustre”.
